

Extravirgin Olive Oil Body Cream

General characteristics

Born from the need to adequately treat the skin after a bath or shower, this emulsion has a great emollient; contrary to common emulsions for the body, however, is not greasy or weigh down the skin, leaving the pleasant sensation of experience with clean cleansing.

The skin needs to restore its physiological balance affected by the use of detergents for bathing, especially in terms of hydration, acidity and lipid requirements. This Body Lotion, with moderately acid pH, contains lipids fully compatible and highly emollient, Sweet Almond Oil as Extra Virgin Olive Oil containing a high percentage of unsaponifiable. Also contains Skin Moisturizing Factor (NMF), a mixture of components built on the model of the film naturally present on the skin surface when in optimal conditions; it is made from Wheat Germ (*Triticum vulgare*) and Glucose.

The Distilled Orange Blossom also helps keep skin hydrated and firm.

A light, fresh fragrance formulation rounds.

Formulation structure

Oil in water emulsion shiny and not greasy.

Lipid phase: Emulsifier, antioxidant, natural fat.

Aqueous phase: purified water, preservative multiple system, wetting
